

01 — THE CHALLENGE

You want AI working for your business. **Your data can't leave your control.**

You can already see what agentic AI could do for your teams and your customers. But between that ambition and real adoption stand three hard realities.

1

Your sensitive data can't go to the public cloud.

Your customer records, case files and contracts are bound by regulation.

2

Your AI bill grows with every success.

The more your teams rely on AI, the less predictable your budget becomes.

3

Building it yourself takes too long.

Sourcing hardware, models and integrations turns your pilot into a long IT programme.

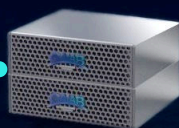

02 — MEET GAIB™ APPLIANCES

So we brought AI **under your control.**

GaiaB™ is a sovereign enterprise AI platform. With GaiaB™ Appliances, it runs within your environment, under your control: hardware, software and AI models come pre-integrated—ready for you to build and operate enterprise agents and workflows.

No per-token API fees. Scalable. Sovereign. Controlled.

GaiaB™

GDPR-ready

Air-gap capable

MCP-enabled integration

Made in Europe

From infrastructure to AI solutions. **One sovereign AI platform.**

BUILD & EXPERIENCE

GaiaB™ Agentic Environment

Build, connect and experience intelligent agents grounded in enterprise knowledge.

CONTROL, GOVERN & OPERATE

GaiaB™ AI OS

Control, govern and operate enterprise AI securely across its lifecycle.

DEPLOY

Infrastructure

Deploy sovereign AI with GaiaB™ Appliances, AUSTRIACARD's European sovereign cloud, or on your own infrastructure.

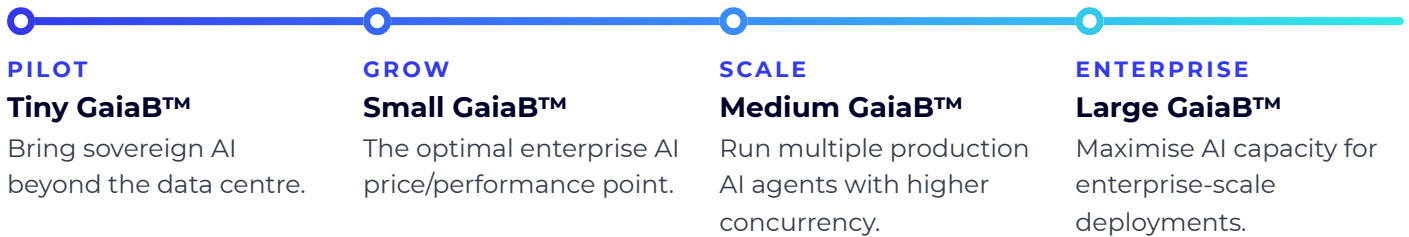

04 — FOR YOUR PEOPLE

AI Innovation **Unleashed.** **Under your control.**

GaiaB™ is built to empower your people, not replace them. Agents take the friction out of the workday, so your teams spend their time on decisions, customers and ideas.

05 — GAIAB™ APPLIANCE CONFIGURATIONS

Start with one appliance. **Scale without rebuilding.**

06 — SOVEREIGN AI IN ACTION

Operational Intelligence

Case records and communications, analysed offline.

Archive Classification

Archives turned into searchable, AI-ready knowledge.

Contextual RFP Analysis

Bids compared consistently, every finding sourced.

Security Operations

Threats investigated in plain language.

Software Engineering

A coding agent that keeps source code in-house.

Reference use cases. Deployment is project-specific; readiness varies.

07 — BUILT ON TRUST

From the company trusted with **payment cards and identity documents.**

Your data and business intelligence stay exclusively yours.

No third-party cloud access

Air-gapped deployment

GDPR-ready by design

Made in Europe

Book your live demo or sizing consultation

We'll map your first use case and recommend the right deployment option and configuration.
